### HOW TO FIGURE COLUMN-INCHES

Display advertising is measured in column-inches, which is calculated by the number of columns\* wide by how deep the ad is, in half-inch increments. For example, a 12-column-inch ad can take various shapes:

- 1 column by 12 inches deep
- 2 columns by 6 inches deep
- 3 column by 4 inches deep

The smallest ad we offer is one column by two inches deep.

Feel free to ask for assistance in determining what's best for your advertisement! We can show you examples of similar ads that have run in the past.

\*Our column width is approx. 2<sup>3</sup>/<sub>8</sub> in.
